# DEVELOPMENTAL PSYCHOLOGY

## TABLE 1

1. The first section of the table lists the names of the authors of the studies included in the meta-analysis. The names are listed in alphabetical order of the last name. The first name is the first author, and the last name is the last author. The names are listed in the first column of the table.

2. The second section of the table lists the titles of the studies. The titles are listed in the second column of the table.

3. The third section of the table lists the years of publication of the studies. The years are listed in the third column of the table.

4. The fourth section of the table lists the sample sizes of the studies. The sample sizes are listed in the fourth column of the table.

5. The fifth section of the table lists the effect sizes of the studies. The effect sizes are listed in the fifth column of the table.

6. The sixth section of the table lists the p-values of the studies. The p-values are listed in the sixth column of the table.

7. The seventh section of the table lists the confidence intervals of the studies. The confidence intervals are listed in the seventh column of the table.

8. The eighth section of the table lists the heterogeneity statistics of the studies. The heterogeneity statistics are listed in the eighth column of the table.

9. The ninth section of the table lists the publication bias statistics of the studies. The publication bias statistics are listed in the ninth column of the table.

10. The tenth section of the table lists the overall effect size of the studies. The overall effect size is listed in the tenth column of the table.

11. The eleventh section of the table lists the overall p-value of the studies. The overall p-value is listed in the eleventh column of the table.

12. The twelfth section of the table lists the overall confidence interval of the studies. The overall confidence interval is listed in the twelfth column of the table.

13. The thirteenth section of the table lists the overall heterogeneity statistic of the studies. The overall heterogeneity statistic is listed in the thirteenth column of the table.

14. The fourteenth section of the table lists the overall publication bias statistic of the studies. The overall publication bias statistic is listed in the fourteenth column of the table.

15. The fifteenth section of the table lists the overall effect size of the studies. The overall effect size is listed in the fifteenth column of the table.

16. The sixteenth section of the table lists the overall p-value of the studies. The overall p-value is listed in the sixteenth column of the table.

17. The seventeenth section of the table lists the overall confidence interval of the studies. The overall confidence interval is listed in the seventeenth column of the table.

18. The eighteenth section of the table lists the overall heterogeneity statistic of the studies. The overall heterogeneity statistic is listed in the eighteenth column of the table.

19. The nineteenth section of the table lists the overall publication bias statistic of the studies. The overall publication bias statistic is listed in the nineteenth column of the table.

20. The twentieth section of the table lists the overall effect size of the studies. The overall effect size is listed in the twentieth column of the table.

NOTE. The table lists the names of the authors, the titles of the studies, the years of publication, the sample sizes, the effect sizes, the p-values, the confidence intervals, the heterogeneity statistics, the publication bias statistics, and the overall effect size, p-value, confidence interval, heterogeneity statistic, and publication bias statistic of the studies.

**Jona M. Rosenfeld (Israel)**  
**William Simon (USA)**  
**M. Brewster Smith (USA)**  
**J. M. Tanner (UK)**  
**J. Robertson Unwin (Canada)**

This new journal provides a high-level medium of communication for the consideration of such important and topical issues as: processes involved in the psycho-social and cognitive development of adolescents, the political views and values of youth, psychological changes during puberty, drug abuse and the law, the formation of identity, the effectiveness and legitimacy of education, evaluation of therapies and therapists, and other current topics and problems.

Articles accepted for the first issues include: **Thomas J. Cottle**, On Studying the Young • **W. Simon**, J. H. Gagnon, and **A. Stephen**, Son of Joe: Continuity and Change Among White Working Class Adolescents • **Zena S. Blau**, Maternal Aspirations, Socialization and Achievement of Boys and Girls in the White Working Class • **G. H. Borowitz**, **J. Costello**, and **J. G. Hirsh**, Clinical Observations of Ghetto Four-year Olds: Organization, Involvement, Interpersonal Responsiveness and Psychosexual Content of Play • **D. Offer**, Attitudes Towards Sexuality in a Group of 1500 Middle-Class Teen-Agers • **Robert A. Burt**, Protecting Children from Their Families and Themselves: State Laws and the Constitution • **O. Khaton** and **R. Carreire**, Minority Group Adolescents' Attitudes Towards Mental Health • **L. C. Frederickson**, Value Structure of College Students.

# JOURNAL OF YOUTH AND ADOLESCENCE

The Journal of Youth and Adolescence is a multidisciplinary journal devoted to the study of youth and adolescence. The journal is concerned with the development of the individual from childhood through adolescence and young adulthood. The journal is open to all areas of research and theory, and to all methods of inquiry. The journal is required reading for all students and researchers in the field of youth and adolescence.

"... the fundamental volume for anyone who wants to use and particularly to design amplifiers intelligently."—*American Journal of Physical Medicine*

## PRINCIPLES OF APPLIED BIOMEDICAL INSTRUMENTATION

By **L. A. Geddes** and **L. E. Baker**, both of Baylor University

"This volume is full of discussions of the real problems in medical instrumentation that only those who have considerable experience both in the use and in the development of these methods can describe adequately. It is difficult to single out any particular chapters because all are at a very high level.

"The section on amplifiers is of course very elaborate and very excellent. It includes again very interesting discussions on sub-

jects that are often neglected in textbooks such as a discussion on the cathode follower and the driven shield cathode follower. . . . The special discussion on input stages for microelectrodes which includes discussions of the negative capacity amplifier is one of the most elaborate and best that have appeared in books on biomedical electronics."

—*American Journal of Physical Medicine*

1968 257 illus. 479 pages \$14.95

a major breakthrough in the differential assessment of brain damage—

## ASSESSMENT OF BRAIN DAMAGE

A Neuropsychological Key Approach

By **Elbert W. Russell**, Veterans Administration Hospital, Cincinnati, **Charles Neuringer**, University of Kansas, and **Gerald Goldstein**, Veterans Administration Hospital, Topeka, Kansas

A volume in the Wiley Series on Personality Processes, edited by Irving B. Weiner

The approach detailed in **ASSESSMENT OF BRAIN DAMAGE** is a departure from traditional methodologies, bridging the gap between clinical intuition and purely statistical measurements. The authors describe their research and findings with a series of neuropsychological keys developed by them as a parallel to the taxonomic keys used in biology. Administered in conjunction with the Halstead-Reiten battery of brain damage

tests, the keys are highly accurate, not only in predicting the presence or absence of brain damage, but in locating and typing lesions. Easily adaptable to any area in psychology where assessment data is needed, the tools discussed in this new book will be a valuable resource for all workers interested in neuropsychology.

1970 167 pages \$12.95

"... the only comprehensive treatment of the principles of biotelemetry."—*Science*

## BIO-MEDICAL TELEMETRY

Sensing and Transmitting Biological Information from Animals to Man

Second Edition

By **R. Stuart Mackay**, Boston University and Boston University Medical School

"Mackay's book . . . covers nearly all aspects of bio-telemetry without the repetition that occurs in a book of which many authors have contributed . . . the life scientist will be pleased with the nonmathematical descriptions of electric circuits which are of practical use to him."—*Science*

The new Second Edition includes material

on fetal studies, human studies and hospital procedures, satellite studies, multiple signals from single transmitters, and new components. The pertinent references have also been increased, now totaling approximately 1600.

1970 207 illus. 533 pages \$13.95

# Implement Your Research with these Tools from Wiley-Interscience

## PRINCIPLES OF APPLIED BIOMEDICAL INSTRUMENTATION

This book is a comprehensive text and reference work for students and researchers in the field of biomedical instrumentation. It covers the principles of instrumentation, the design and construction of instruments, and the application of instruments in the laboratory and in the clinic. The book is written in a clear and concise style, and includes many diagrams and photographs to illustrate the concepts discussed.

The book is divided into two main parts. The first part, "Principles of Instrumentation," covers the basic principles of instrumentation, including the measurement of physical quantities, the design of instruments, and the application of instruments in the laboratory and in the clinic. The second part, "Design and Construction of Instruments," covers the design and construction of instruments, including the selection of components, the design of the instrument, and the construction of the instrument.

## ASSESSMENT OF ORAL DAMAGE

This book is a comprehensive text and reference work for students and researchers in the field of oral damage assessment. It covers the principles of assessment, the design and construction of assessment instruments, and the application of assessment instruments in the laboratory and in the clinic. The book is written in a clear and concise style, and includes many diagrams and photographs to illustrate the concepts discussed.

The book is divided into two main parts. The first part, "Principles of Assessment," covers the basic principles of assessment, including the measurement of oral damage, the design of assessment instruments, and the application of assessment instruments in the laboratory and in the clinic. The second part, "Design and Construction of Assessment Instruments," covers the design and construction of assessment instruments, including the selection of components, the design of the instrument, and the construction of the instrument.

## BIOMEDICAL ELECTRONICS

This book is a comprehensive text and reference work for students and researchers in the field of biomedical electronics. It covers the principles of electronics, the design and construction of electronic instruments, and the application of electronic instruments in the laboratory and in the clinic. The book is written in a clear and concise style, and includes many diagrams and photographs to illustrate the concepts discussed.

The book is divided into two main parts. The first part, "Principles of Electronics," covers the basic principles of electronics, including the measurement of electrical quantities, the design of electronic instruments, and the application of electronic instruments in the laboratory and in the clinic. The second part, "Design and Construction of Electronic Instruments," covers the design and construction of electronic instruments, including the selection of components, the design of the instrument, and the construction of the instrument.

## Information for Contributors

**DEVELOPMENTAL PSYCHOBIOLOGY** will promptly publish papers dealing with physiological, behavioral, or genetic studies of the developing organism. These may include research reports, theoretical treatises, notes on apparatus or methodology, proceedings of symposia, and monograph supplements. In addition, the Journal will carry letters to the editors, announcements of general interest to our readers, and book notices.

Materials should be sent directly to the Editor-in-Chief, Dr. Gilbert W. Meier, Nebraska Psychiatric Institute, University of Nebraska College of Medicine, 602 South 44th Avenue, Omaha, Nebraska 68105, U.S.A., or your nearest Regional Editor. Publication is anticipated in six months or less after acceptance. Papers must not be submitted simultaneously to, or have been previously published in another journal except as an abstract or brief, preliminary report.

Authors should follow a clear, concise style. Articles should be typewritten on one side of 8½ x 11 inch paper of good quality, double-spaced throughout, have a wide margin all around, and be submitted in three copies (ribbon plus first two carbon copies) complete with tables and illustrations. All pages should be numbered serially beginning with the title page.

Research reports should be subdivided into the following sections: *Synopsis* (no heading required), *Introduction* (no heading required), *Method*, *Results*, *Discussion*, *Notes* (if applicable), *References*.

**Language:** English will be the language of publication.

**Title:** The title should be typed on page 1 of the manuscript together with author(s); laboratory or department and institution of origin; city, state, country; complete address for receiving proofs and reprint requests. Names of authors should be positioned vertically and grouped to avoid repeating an affiliation. If desired, additional affiliations or present addresses of authors may be stated in the *Notes* section. A short, running title of not more than 50 characters (including spaces) suitable for alternate page headings should be typed on page 2 of the manuscript, if the full title exceeds this limitation.

**Synopsis:** The synopsis should adequately summarize the paper in no more than 200 words and be typed on page 3 with a list of up to 12 words or phrases suitable for indexing purposes.

**Notes:** This section will include all material that otherwise would appear as footnotes, with the exception of the date the manuscript is received at the editorial office and table footnotes. *Notes* should be typed

on a separate page following the *Discussion* section. If they relate to the title or the authors, *Notes* should not have superscripts. Text footnotes should be numbered consecutively throughout the paper with superscripts in Arabic numerals. Table footnotes should be lettered consecutively within each table with superscripts in lower case Roman.

**References:** Authors cited in the text should be indicated by family name followed by year of publication (e.g., Hilton, 1967). When a reference has more than two authors, all the names should be used in the first citation, and on subsequent citation thus: (Hilton *et al.*, 1967). Where more than one paper by the same author(s) have appeared in one year, the convention will be: (Hilton, 1967a,b). Journal title abbreviations listed in *Index Medicus* should be used.

**Form for journal reference:** Alexander, G. J., Miles, B. E., Gold, G. M., and Alexander, Rita B. (1967). LSD: Injection early in pregnancy produces abnormalities in offspring of rats. *Science*, 157:459-460.

**Form for chapter reference:** Meier, G. W. (1968). In search of the engram: In the nursery. In G. Newton and S. Levine (Eds.), *Early Experience and Behavior*. Springfield: Thomas. Pp. 338-364.

**Units of Measurement and Symbols:** Examples: 5 µg 2 g 9 ml 8% <sup>14</sup>I. Units of measurement are abbreviated and unpunctuated when used with numerals.

**Illustrations:** These should be identified on the back lightly in pencil with number and author's name, indicating "top." Prints of figures should be sharp, clear, and glossy. Half-tones should be glossy, strongly contrasted prints. Captions should be typed on a separate sheet at the end of the manuscript. Indicate approximate point of insertion in the text.

Magnification of photomicrographs should be stated together with dimensional scale.

**Tables:** Each table should be typed on a separate sheet, indicating approximate point of insertion in the text.

**Proofs:** Printer's errors should be indicated marginally on the proofs. Other changes on the proofs may be charged to the author.

**Reprints:** The author will receive with his galley proofs a reprint order form which must be completed and returned with the proofs. Senior authors will receive 50 reprints of their articles without charge.

New York, N.Y. 10016

*Contents*

EDITOR'S NOTE .....	289
ACKNOWLEDGMENT .....	291
SOME DEVELOPMENTAL OBSERVATIONS ON THE EFFECTS OF PROLONGED DEPRIVATION OF LOW-VOLTAGE FAST-WAVE SLEEP IN THE DEERMOUSE <i>Peromyscus maniculatus bairdi</i> .....	Merrill M. Miller 293
ONTOGENY OF VISION IN THE PEKING DUCK ( <i>Anas platyrhynchos</i> ): THE PUPILLARY LIGHT REFLEX AS A MEANS FOR INVESTIGATING VISUAL ONSET AND DEVELOPMENT IN AVIAN EMBRYOS .....	Marieta B. Heaton 313
DEVELOPMENT OF A FATTED MALE PHENOMENON IN CALIFORNIA SEA LIONS .....	Ronald J. Schusterman and Roger L. Gentry 333
REACTIONS BY DIFFERENTIALLY RAISED RHESUS MONKEYS TO NOXIOUS STIMULATION .....	Lawrence Lichstein and Gene P. Sackell 339
THE EFFECT OF IMPRINTING TRAINING ON HYPERSTRIATAL EEG IN YOUNG DOMESTIC CHICKS ( <i>Gallus domesticus</i> ) .....	Allan H. Schulman 353
AGING AND WATER SUBMERSION IN C57BL/6J MICE: INITIAL PERFORMANCE AND RETEST AS A FUNCTION OF RECOVERY AND WATER TEMPERATURE .....	William E. Wright, Jack Werboff and Burton N. Haggett 363
ACTIVITY OF PURKINJE CELLS, PARALLEL FIBERS, AND CLIMBING FIBERS IN THE DEVELOPING RABBIT CEREBELLUM .....	N. Delhaye-Bouchaud 375
AUTHOR INDEX .....	391
SUBJECT INDEX .....	393
